0 General Rules

QUESTION

When is a Champion counted as a Character, and when not?

RULING

Champions count as Characters for Challenges, including rules interactions such as Bretonnian Blessings (Regaining the Blessing and Losing the Blessing) and Wolves of the Sea (Favour of the Gods) / Hordes of Chaos (For the Dark Gods!).

For no other situation, item or rules interaction they count as Character. They have their own rules on pg. 199; which are to be followed. The exception for magic missiles being able to be shot by a champion against a separate target still applies. Champions can use a set of weapon in combats different to that of their unit if they are equipped with it. They are removed if the entire unit is removed, wounds lost are allocated last to the champion of a unit.

They cannot move through the ranks and cannot use items which speak of characters using them, even if they can buy them. In addition, only Characters have command range, so Champions cannot use any item that requires command range to work. In addition, they do not benefit from additional magic item point allowance allocated to characters in some armies of infamy

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

The Fighting Rank. How do you determine the number of attacks of a model with closing in and stepping forward? How does the new FAQ, affect this? How are casualties removed in combat? How does this affect the number of attacks a unit can make?

RULING

Which models can attack and the number of attacks those models can make is determined in step 1.1. Per the combat phase sequence (as this step is not repeated) this is not revisited and largely does not change during a fight (this is also known as the "Combat Lock" or "Combat Freeze"). The FAQ about Press of Battle and Stepping forward from a fighting rank into another creates a clear exception to this norm: Models that were already in a fighting rank and determined to have been able to fight in step 1.1., can still make any remaining attacks they have after stepping up as they are closing in. In addition, if stepping up and closing in brought them into base to base contact with the enemy they may make their full number of attacks rather than just a singular attack in order to "maximizing their number of attacks".

For all other cases, the number of attacks is not changed when models Step Forward, move to replace characters that retire from the Fighting Rank, or change position in the unit due to shrinking units or other reasons.

Casualties are removed among models that can fight (within M") and from the ends of each rank (owner chooses from which end for every casualty):

- Firstly, from the first fighting rank,
- secondly, from the second fighting rank (if applicable),
- thirdly, from models making supporting attacks (if applicable),
- finally from models of the unit that cannot fight. Remove actual models from the rear (mark the models counting as casualties). Once you removed your first casualty and if the back rank is incomplete, you must continue to remove models from the same direction in the rear rank.

Remember that a model that steps up into a different fighting rank due to casualty removal must allocate its attacks only against an enemy unit that it could have attacked prior to stepping up and models that step up into fighting ranks from outside cannot attack t all (as determined in 1.1)

#50 Comfaq

2 Movement Phase

QUESTION

How is the distance of a wheel measured?

RULING

It is measured by taking a straight line from the outside front corner of the starting position to the outside front corner of the end position of the outermost model. For wheels that move over an angle greather than 90 degrees, measure the wheel in increments of (up to) 90 degrees.

References: Basic Movement CRB 123 - 124

#51 Comfaq

2 Movement Phase

QUESTION

How is he rear corner defined that is allowed to move through units (from the previous FAQs)

RULING

If there is no alternative a unit can move through other units as long as the front edge is not touching the other unit.

References: Wheel through another unit GW FAQ 1.5.1 9

#67 Comfaq

3 Shooting Phase

QUESTION

What is Shooting or a Shooting Attack? Can i use special rules that grant abilites to be used in the Shooting Phase after Marching or Charging? What about evasive or lone character protection against such abilities?

RULING

Besides the attacks with Missile weapons units do when selected in the shooting phase for shooting, the following abilities are considered to be shooting or shooting attacks:

- Abilities that inflict hits, wounds suffered or wounds lost against a target are shooting attacks
- Magic Missiles and Vortexes are defined as shooting, if they have a target or not
- Any ability that is introduced as "shooting " or "instead of shooting normally" or an "attack in the shooting phase" or being "used in the shooting phase" (Column of Fire, Pidgeon Bomb, Wailing Dirge, Breath Weapon etc.) is shooting

Anything else happening in the Shooting Phase is not a shooting attack (Zzzap! Ability of the Doomwheel)

You cannot use a Shooting Attack or Shooting after you marched (including abilities that can be used in combat like Wailing Dirge or Storm Call)

Evasive and Lone Character Protection can be used against:

- Any of those abilities affirmed to be shooting/attacks above that have a single target unit/model (and normal shooting)
- Breath Weapons and any of those abilities with intended target, if the unit to be protected or using evasive is the intended target. The intended target is the unit you aim to hit the most models possible of. This means you cannot try to hit a character if that means you hit less models of the intended target unit.
- Cannon Fire and Column of Fire can only have evasive used against them if the target point/template lies on a models base.

Evasive and Lone Character Protection cannot be used against any of those abilites that have no target (Burning Gaze, Gaze of Gork, Strangleroots, Cannon Fire if the target point was not on the models base).

#106 Comfaq

0 General Rules

QUESTION

Does the controlling player choose the direction before or after rolling the distance for a spell, effect, or model (such as a fanatic) that moves in a random distance?

RULING

Choose before rolling. RAW is ambiguous, and the functional difference is minimal. This is less a "correct" answer and more of having something in place to keep the game flowing.

References: FanaticsMagic Vortex

#125 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Do you need to maximize the number of models in combat or take the shortest route if that means that the unit charges two units or has the rule that you only charge one unit takes precedence over maximising.

RULING

If you can avoid charging two units you have to do so, event if that means you cannot maximise or take a longer route. Please note that completing the charge has priority. So you would charge two units if that is the only way to charge successfully.

References: The Charge Move CRB 126Multiple Charge Targets CRB 130

#145 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

What happens when you charge a unit in the rear with an incomplete rank and kill all models in that rank? Do the models in the "new" rank can attack since they did not step forward nor were killed?

RULING

No, only those models can attack in their initiative step that were projected into the fighting rank before and weren't killed during prior attacks. To make it easier, you can determine the fighting rank for rear charges at the beginning of the combat, after characters have moved and challenges have been called.

References: Choose Combat & Determine Who can fight CRB 145ff

#181 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

What happens when a unit charges a unit and has no other choice but to charge in a way that a third (opponent) unit is within 1" of the charging unit

RULING

Since charge moves are conducted in the movement phase, the 1" rule comes to use and the units have to be nudged 1" away

References: The 1" Rule CRB 118

#184 Comfaq

4-3 Combat Phase Break Test

QUESTION

Do you have to announce the use of your general’s leadership before a break or leadership test or after the test is done?

RULING

Since the sequence for break tests clearly states rolling first and then comparing and checking later, you can roll first and then use Inspiring Presence or not, depending on the dice roll. For leadership tests, Inspiring Presence is optional too, since under Inspiring Presence "can” is stated.

References: Inspiring Presence CRB 203

#189 Comfaq

4-3 Combat Phase Break Test

QUESTION

What happens when a unit that gives ground cannot move more than 1" and will be within 1" of a unit it is in combat with, be it because of terrain or other units?

RULING

Since giving ground is not possible, the units remain locked in combat, but all units move as far as possible and remain locked at the new position (see GW FAQ).

References: Give Ground CRB 134

#201 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Can you decide to alter the charge path of a charging unit to avoid discarding the higher dice to make your charge successful, if you would instead fail the charge because of the terrain (by rolling a 1 and a 6 on the charge roll for instance, in addition to -1 M)?

RULING

Yes. You define the path taken by the unit after rolling the dice (it's already the case for wheeling to maximise contact) because you must move by the shortest route possible to reach the charge target. Make charges happen if possible.

References: The Charge Move CRB 126

#202 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Does the free wheel to align count in the charge move distance for the purpose of rules like Furious Charge and Impact Hits (reminder: When a unit wheels, every model counts as having moved as far as the outside model. Page 124)?

RULING

The free Wheel takes place after making contact. It is separated from the charge move, both for placement and initiative.

References: Aligning to the Enemy CRB 126, Who Strikes first? CRB 146

#207 Comfaq

4-3 Combat Phase Break Test

QUESTION

Give Ground : A unit giving ground stops moving immediately should it come into contact with another unit or terrain. Which type of terrain is meant here?

RULING

Only physical terrain features that are not open ground, meaning no hills and no vortexes. Note that this also affects units already in terrain prior to the give ground move, meaning that a unit already in terrain can't give ground and instead does not move

References: Give Ground CRB 134

#209 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

What happens if a unit makes contact with another unit not being the charge target during the free wheel of alignement?

RULING

If it was clear at the time of the charge declaration that the projected charge will end like this and you will hit the second unit during alignment, no matter the charge roll, you have to declare a charge against both units. If there is a slight possibility to avoid this situation, the unit should try and wheel around that unit. If it is impossible to avoid the contact in any case with the given charge roll result (but would have been with a better charge roll result), the charging unit conducts an accidental contact during a charge and may chose to either halt the charge (leading to a disordered charge with most likely only 1 model in base contact against the original charge target) or to continue (leading to a disordered charge with both units, in which the accidental contacted units might try to align). If the unit continues into a fleeing unit, the fleeing unit is destroyed and the charging unit's movement comes to an end. The charged unit wheels to align if necessary, in which case the charging unit makes a disordered charge.

References: Accidental Contact CRB 131

#216 Comfaq

2 Movement Phase

QUESTION

If a unit marches through difficult terrain, how is the movement calculated?

RULING

2(M-1) - Reduce the movement characteristic by one, then double it.

References: Marching CRB 123, Difficult Terrain CRB 135

#228 Comfaq

3-2 Shooting Phase Roll to Hit

QUESTION

How do you deteremine cover if a model can see multiple arcs of an opponent unit?

RULING

Check all line of sights from the shooting model to all models of the target unit, ignoring the lines which cross over models of the target unit. Models of the target unit you cannot see because of other models of that unit are ignored. Apply then the rules for cover, depending on how much of the unit is obscured. Note that according to GW FAQ, Woods give cover even without LOS crossing over them, as long as more than half of the target unit is within the Wood.

References: GW FAQ, Cover

#236 Comfaq

3-1 Shooting Phase Declare Target

QUESTION

If a unit wants to shoot at units on a hill - do units that are on the same hill and are further from the center than the target unit block line of sight for the shooting unit?

RULING

No, since they can see you over that unit, you can see them too - the rules for being closer to the center of the hill works both ways, imagine the unit closer to the center being higher elevated.

References: GW FAQ, Vantage Point CRB 271, Beyond the Crest CRB 271

#237 Comfaq

3-1 Shooting Phase Declare Target

QUESTION

Can you see a unit that is only partially on a hill and can you see a model that is only partially on a hill?

RULING

Yes, given no other unit obstructs that LoS. Treat models and units partially on a hill as they were on the ground, but the hill itself blocks no line of sight to those models that are partially on the hill.

References: GW FAQ, Vantage Point CRB 271, Beyond the Crest CRB 271

#263 Comfaq

4-3 Combat Phase Break Test

QUESTION

How do you flee along an impassable terrain? If a fleeing unit reaches impassable terrain, how does it move?

RULING

First, begin to flee as normal.

If the flee move would cause the unit to contact impassable terrain, it must pivot around its centre as soon as it is possible for the unit’s flank to be flush against the terrain feature, while facing the direction which will allow it to resume its flee move along its initial flee path as directly as possible. The unit will continue to flee along the side of the impassable terrain until it is able to pivot again around the feature's corner, and move along the next side of the feature (this might need to be done multiple times in case of a non-square feature, or multiple impassable features), until its centre is back on top of the initial direction of flight, at which point the unit will pivot in order to resume fleeing in its initial direction.

In the case where the unit is too close to pivot its flank against the impassable feature (this is often the case for very wide units, even if they are not backed against the feature), it must first pivot around its centre while facing the direction which will allow it to resume the unit’s flee move along its initial flee path as directly as possible. It then moves forward (taking peril tests as required), until pivoting with the unit’s flank against the feature is possible, then follow the procedure described above.

References: Fleeing through Terrain CRB 133

#273 Comfaq

4-4 Follow Up & Pursuit

QUESTION

When two units are in combat with the same facing of an enemy unit that flees from combat, how is the pursuit resolved? Do the units block each other when moving toward or pivoting to face the fleeing enemy?

RULING

Each pursuit happens sequentially, with the controlling player choosing their order. Pivot moves always ignore the presence of other units and terrain. When the first unit makes its pursuit, it may end overlapping with another friendly unit that was part of that combat (even though this is normally now allowed); and may move through those units until the first units move is complete. The other units do ignore the other units when making its own pivot aswell, but their move will often be blocked by the unit that has moved first. If the unit can only partly pivot and will overlap after pivot with the unit that has moved first, it pivots instead as far as it is able toward the fleeing enemy and does not move further.

References: Pivoting CRB 125, Pursuit CRB 156

#277 Comfaq

0 General Rules

QUESTION

How are multiple Hits with the Multiple Wounds (X) special rule resolved against a unit with multiple Multiple Wound models? How do situations work where hits are inflicted on certain models (Cannons etc.)

RULING

Resolve attacks against the models that are hit in specific cases like cannons, or allocated attacks against champions or against the unit if the unit is attacked. This means, use the weapon skill, toughness, armour and ward saves accordingly.

Unsaved wounds are then applied one after another to the unit, except in the case of champions being hit, which have their own conditions under which they are hit separately, including cannons (which can hit the champion separately). Page 102 and GW FAQ tell us to start with wounds that inflict Killing Blow, followed by Multiple Wound (X) wounds, and finally ending with single wound attacks. For wounds on the unit, Allocate these wounds starting with the model that is already wounded (ignore the champion if he is wounded already).

References: Multiple Wound Models CRB 102

#278 Comfaq

4-4 Follow Up & Pursuit

QUESTION

How do you follow up? And what happens if, while performing the follow up move towards a unit that Gives Ground, the unit would contact instead another enemy unit that was not in the combat? Is it accidental contact or should movement stop at 1" from the unit that would be contacted?

RULING

To conduct a follow up move, do the opposite of give ground: move directly towards the enemy unit that gave ground, without turning, pivoting or otherwise changing its facing in any way until you make contact or until you stop because of contact with an impassable terrain or friendly unit. If you contact another enemy unit, this is accidental contact (pg. 131). if the enemy unit is contacted in the rear or flank, or if it is already in combat, nudge that unit and any units it is in combat with) aside and conduct the follow up move. If the enemy unit is contacted in its front, it can chose to accept the combat, effectively stopping the follow up move or give ground to avoid it.

References: Accidental Contact CRB 130, Follow Up CRB 156

#287 Comfaq

0 General Rules

QUESTION

How do you determine in which arc of a charge target a single model is?

RULING

Only check the front edge of the model - if the majority of the front edge of a model is in one arc, then charge this arc. If you cannot come to an agreement with your opponent, charge the arc which offers the lower combat resolution

References: GW FAQ

#303 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

How do you calculate the correct armour save if you have Parry, other modifiers, and Armour Piercing?

RULING

Parry cannot improve your armour save beyond a 3+ value. This means that when calculating the base armour save (before any roll modifiers), Parry will cap the result at 3+ if not improved by other means. However, if the unit is affected by a rule that modifies the armour save value itself (e.g. Plague of Rust), you can balance positive and negative modifiers against each other. For example Rune of Oath & Steel. Note that modifiers to the armour save roll—like Armour Piercing, Totem of Rust, etc.—do not interact with this cap and leave it at 3+. They apply after the save value is determined, and reduce the final roll needed for success.

References: GW FAQ

#340 Comfaq

4-3 Combat Phase Break Test

QUESTION

If an enemy unit loses combat and will Give Ground off the battlefield, what are the winning unit's options?

RULING

The winner can attempt to restrain and reform as normal. If the unit would Follow Up, they do not move as there is no enemy to move into contact with (and a unit can only overrun if the enemy is destroyed before the break test).

#347 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

When charging a unit in an arc that features an incomplete rank, how are you to make contact with that unit? What happens if you overrun or pursuit into such a unit, but only hit the template or rather footprint?

RULING

If charging, Use the footprint of the unit, extending the incomplete rank or file to be complete, and have the charging unit make contact (and maximize contact with) models who would be in those positions. If Overruning or during a pursuit, you only make contact with such an unit if you hit actual models. In that case, you would conduct your move wheeling to maximise towards the footprint of the unit.

#359 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

When do you actually conduct accidental contact during a charge? Do you get a charge reaction against it? What happens if you have Fly? And what happens if the original charge target fled?

RULING

If wheeling around the obstacle would cause you to do a failed charge, or if the unit is not able to wheel around the obstacle unit at all, you conduct accidental contact during a charge. The charging unit only counts as having redirected prior so it can make contact - you don't get a charge reaction, which only is available after a unit is selected as charge target during a redirect or charge declaration.

A charging unit must endeavour to bring as many models as possible within its front rank into base contact with models in the charged unit. That is the highest priority and the unit must use Fly (X) if needed. You determine if Fly (X) is needed when the unit starts its charge move. If the charging unit with Fly(X) would make a failed charge and ends on top of the enemy unit, do accidental contact. However, if you fly over/behind the enemy unit, you cannot do accidental contact as it is not the enemy unit, but the missing charge distance that leads to the failed charge. If the charge target declared flee or is fleeing for any reason, you do not conduct accidental contact during a charge at all, as you have to check for accidental contact during Running Down the Foe. During Running down the Foe, you charge as normally and you never make a failed charge, thus you always try to wheel or move around the obstacle unit. Only if you cannot do that, you will make accidental contact. This means, in most caes, that units with Fly (X) or Skirmishers go over or around obstacle units.

References: Accidental Contact during a Charge CRB 131, Pursuit into a fresh Enemy CRB 157

#369 Comfaq

0 General Rules

QUESTION

When an attack that uses a template (such as Bombardment or an assailment or magic missile that uses a 3" or 5" blast) scatters to be partially off the table, how is this resolved?

RULING

Template attacks resolved fully even if the template is partially off the table.

References: GW FAQ

#374 Comfaq

0 General Rules

QUESTION

Can you see "into" a base of a model or does the base itself block Line of Sight of that Model? Can you aim cannon shots onto the base of a model you see?

RULING

No, bases fully block line of sight.

References: Line of Sight CRB 103

#376 Comfaq

2 Movement Phase

QUESTION

Q: Redress the Ranks requires models to be added (or subtracted) from the left and right side of the unit "as equally as possible." What happens when it is only possible to add models to one side of the unit?

RULING

Redress the Ranks can at most add one more model to the left side than the right (or vice versa). If one side is blocked, then a unit can only redress to add a single model to the opposite side.

When removing models, the last models to remove must be the characters, then the command group, always keeping the standard bearer in the front rank and as close to the centre as possible. Command group models removed from the front rank must go to the second rank (and third in case of a single column). Characters removed from the front rank must go to the rear rank. The player choses the position of all models in their respective back ranks. When adding models to the front rank, the opposite order must be followed: first the command group, then the characters, before rank and file models. The position of added models can be chosen by the controlling player, but must respect the positioning rule for the command group and for characters: standard bearer as close to the centre as possible, command group models to either side, characters anywhere in the front rank. Note that characters may be placed among the command group.

References: Redress the Ranks CRB 125

#392 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

When a unit fleeing from a charge or a combat flees off the battlefield or is destroyed during its flee move (e.g. due to peril tests, dangerous terrain, fanatics, vortexes,...), what happens to a charging/pursuing unit?

RULING

Complete the fleeing unit’s movement, and leave it in place. Then complete charges and pursuits, as if that unit was still fully on the board.

If the fleeing unit is destroyed during the flee move, conduct pursuit and charges towards the position where the last model was removed.

#397 Comfaq

2 Movement Phase

QUESTION

If a unit loses models during its movement, e.g. by moving through a fanatic, dangerous terrain, peril tests or a vortex, when are models removed?

RULING

Remove models right after each damage-dealing source encountered. A reduction in the unit size might affect whether or not it encounters terrain, models or objects behind the first damage-dealing source, and the following wheels might be affected if the unit width is reduced. Charge roll is still affected by terrain based on whether it would be contacted before moving, taking the low dice if the charge path is expected to cross terrain before moving. If the moving unit is a fanatic, he is immediately removed from play and does not move any further if slain.

#399 Comfaq

3 Shooting Phase

QUESTION

When multiple templates would hit a unit in the same shooting sequence (for eample results 2-6 of the miscast table with the dark coven rule or from Sky Lantern bombing), how do you resolve these templates?

RULING

Resolve the templates at the same time. Every hit is assigned to the model that is actually hit, leading to possibly single models suffering multiple hits. Note for single-wound models, this will possibly cause excess damage, which is then lost. Roll for each model on its own.

#404 Comfaq

3-1 Shooting Phase Declare Target

QUESTION

How/When can units draw Line of Sight to points on Hills or in Forests, for example when targeting a point with Cannon Fire?

RULING

The GW FAQ states that Line of Sight is only obstructed to points behind such terrain features and not in these Terrain Features. For Vantage Points, treat any target point as a unit. Any point on a hill can be seen over models and units, provided they are no closer to the center of the hill as the potential target point.

References: GW FAQ, Vantage Point CRB 271, Beyond the Crest CRB 271

#414 Clarification

0 General Rules

QUESTION

Some spells and abilities ask a model to take an Initiative test, such as Terrors Below or Durthu's Wrath. How do temporary modifiers, such as spells, charging, or weapon special rules, affect these? Similarly, what initiative value is used when making an attack with a spell or weapon other than the one chosen to fight with during step 1.1 of combat?

RULING

A model's initiative for attacking, casting an assailment, or making a test always uses its current (modified) value. If tests are made in the Combat Phase, this includes the Charging Units Initiative bonus, even if the test is made out of combat in a turn that unit charges or counts as having charged. However, special rules from / on weapons like Strikes Last or Always Strikes First apply only to attacks made with those weapons - ignore these rules for all other purposes, including attacks made with different weapons or by different models on a combined profile. In the case of Spectral Doppelganger, attacks with a weapon with Strike First are still resolved on the same initiative as the spell is cast.

References: Spectral Doppelganger, Durthu's Wrath, Strike First, Strike Last

Challenges

#23 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

Does a champion in a unit with a single Rank open a new rank when refusing a challenge.

RULING

No - A challenge can only be declined if all models able to accept it are able to retire to positions outside of the fighting rank, without creating a new rank.

In the case of a single rank unit engaged in the front, this is not possible and the challenge must be accepted. If the unit is engaged in one flank only, the challenge can be declined as the champion or character is able to retire to the other flank.

In the case of a unit with two fighting ranks (due to press of battle), the challenge can only be declined if there is a third rank the character or champion can join.

References: Refusing a Challenge 210, Nowhere to Run CRB 211

#281 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

Regarding the Challenges & Mounts Change - how do you determine which attacks are lost?

RULING

If one participant of the challenge is slain in one initiative step, all attacks with a lower initiative in this combat are lost and will not be conducted. You can only score overkill from attacks of the same initiative of the step in which the participant is slain.

References: GW FAQ

#292 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

If a unit A is engaged with two units B and C, one (B) of which is a single character in a challenge, the rules say that all models of the first unit A which normally must attack the character B due to closeness instead are allowed to attack the other unit C. How does this work with fighting ranks and "full attacks"?

RULING

Since "the unit" is specified in the FAQ about fighting ranks, only the models within M" of Unit C can attack that unit. Please note that these models only get to make 1 A, regardless if they are in base contact with B or not.

References: Who can fight CRB 145, How many attacks? CRB 146, Multiple Units in Combat CRB 147

#335 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

Can you refuse a challenge in a combat with multiple eligible characters, where at least one of those characters cannot refuse a challenge, but others could?

RULING

No, at least one eligible character has to accept the challenge.

References: Challenges CRB 210

Characters

#18 Comfaq

4-1 Combat Phase Choose Combat & Determine Who Can Fight

QUESTION

Can a model that is only in base contact with a champion or a character allocate attacks to the unit itself or does it have to allocate all attacks to the champion or character?

RULING

Yes, the rules which force units to allocate attacks are only relevant for multiple units, but characters and the unit forme one single unit, you can allocate attacks to the unit.

References: Choose Combat & Determine Who Can Fight CRB 145 - 146Multiple Units in Combat CRB 147Characters in Combat 209

#140 Comfaq

0 General Rules

QUESTION

Is a character that joins another unit still considered a unit for any rules purpose? What about special rules that unit has, but the character hasn't or vice versa? What happens if a character marches when joining a unit or if the chracter joins a unit that has marched? How do spells interact with characters and units? How do you leave units?

RULING

Characters & Units They form together a single unit, counting together for the Unit Strength of the unit. A Character cannot be targeted inside of a unit with an ability or spell that targets a unit, but by those which target a model or character. If all RnF-models are removed as casualties, the unit ceases to exist immediately. Any special rules of the unit cease to exist (characters still have their own special rules). If a spell was only on the unit (not being cast by self range by one of the characters), the characters lose the effect of that spell. All characters joined to the unit must potentially, depending on Unit Strength and phase, do break checks and panic tests for "nearby friend destroyed", but will only do fall back in good order if failing panic.

Movement If a character moved or marched before joining a unit, the unit will not count as moved/marched and vice versa. The character will lose any rules granted by the unit the moment he leaves the unit or the unit ceases to exist (see below). The Movement Characteristic is checked when a character or unit begins their movement. Any spells or effects (positive or negative) affect the character's movement during the Remaining Moves phase in which the character leaves the unit. This means that if the unit is affected by Miasmic Mirage, the character cannot march, and if the unit is affected by Steed of Shadows, the character may move using Fly (12). If for any reason the character does not follow the Lone Character rules when not in a unit (such as a character on a light chariot), then they must adhere to the normal movement rules for their respective unit type when leaving the unit. If the character becomes a lone character upon leaving, they move as a skirmisher, and move through other models in their unit freely when leaving.

Spells If a character under an effect "that affects the caster and any unit he has joined" leaves a unit, only the caster has the effect, but if he joins another unit, that unit will benefit from that effect too. Note that spells that affect a character will affect the joined unit too, as described on pg. 207. (Note the GW FAQ about creating illegal situations).

The Unit's Rules Whenever the word 'unit' is mentioned in a rules interaction (Spell, Special rule, etc.) that affects the unit the character has joined, apply rules for both the character and the unit he joined. This means that while a character does not receive the special rules of the unit he joins, he gains special rules and effects that are granted by the unit's special rules or effects the unit is under, which state that the unit is affected. Please note that some special rules could cease to apply if a character without a special rule joins a unit or vice versa (e.g. Counter Charge). Special rules that only need the majority of models to have the special rule will work (e.g. Reserve Move).

The Character's Rules Special Rules a character has only apply to the unit if "and any unit they have joined" is mentioned or similar. Special Rules the character has that mention "a unit with this special rule" will still affect him and he is able to use them, even if he

has joined a unit (e.g. Veteran, First Charge), unless it is stated that the special rule will translate to the unit (Stupidity). Else, they will not affect the unit he has joined.

#301 Comfaq

2-4 Movement Phase Remaining Moves

QUESTION

What happens if a character joins a single rank unit?

RULING

The character goes to the first rank, displacing one model to a newly formed second rank, as described under Positioning Characters.

References: Positioning Characters CRB 207

#380 Comfaq

0 General Rules

QUESTION

If a Character is placed in the rear rank outside of combat because there is no room for them in the front rank, do they count as retired? What happens if there is also no space in the rear rank or he shrinks back into the fighting/front rank? What happens if there is space again for characters that retired because of too many characters or there are only places in the fighting rank left due to shrinking units?

RULING

A Character that is not leading from the front is considered retired and cannot confer Inspiring Presence, Hold Your Ground, Aura abilities or similar static benefits unless a rule explicitly states otherwise. Any benefits from spells with the range 'Self' are lost, but spells and abilities that targeted other units or are resolved for global effects remain in effect. Retired models will be counted towards the Units Unit Strength and towards the formation to determine rank bonus, combat order and marching column. They are still considered part of the unit for any check on unit type, model special rule affiliation (unit 'consists entirely' etc.) and target legality (ethereal, unbreakable etc.)

If the character cannot be placed in the rear rank, place him in the closest spot from the rear that is away from a fighting or front rank to retire him. Adjacent characters can be placed behind the rear rank if they retire.

If the unit shrinks down and the character returns by this to the front or fighting rank only because no other position away from a fighting rank is available, he unretires after all casualties are removed, after the initiative step and after any panic checks are resolved, but if this happens in combat he counts as having stepped forward. Outside of combat the usual rules for unretiring characters take place and characters return to the front rank if the formation allows to.

References: Positioning Characters CRB 207, GW FAQ

#413 Comfaq

2 Movement Phase

QUESTION

How does the Move Through Cover rule apply to units where some models have MTC and other models do not?

RULING

The -1M from difficult terrain affects the entire unit, even models not actually in that terrain, but models with the Move through cover special rule will not suffer the -1 Movement penalty.

If a character has joined the unit without Move through cover, he will suffer the penalty (the unit won't) and the unit moves at the modified speed of its slowest model.

In Regard to the higher or lower dice during charges, the unit will always take the lower die if any models do not have the Move Through Cover rule, even if the characters do not actually cross difficult terrain.

References: Move Through Cover

LLO

#306 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Ethereal treats all terrain as open ground, and Grinding Wheels does the same for Low Lineae Obstacles. How does this interact with units that are defending a LLO?

RULING

Because the charge is a move, these units fully ignore the LLO and will move on top of it. For all purposes, units with these rules ignore defended LLO rules.

References: Ethereal, Grinding Wheels

#307 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

How do you charge a unit behind a defended Low linear obstacle?

RULING

Charge the LLO and align towards the LLO instead of the unit. Note that you have to charge the LLO in a way that at least one model of the charging unit is in the front arc of the defending unit, else the charge is considered to be a failed charge. Maximise in a way that as many models as possible are within M" of each other. Also remember that a Lance blunts if charging a unit behind a LLO because it is considered to have conducted a disordered charge.

#322 Comfaq

2-4 Movement Phase Remaining Moves

QUESTION

How do you defend an Low linear obstacle? Aka how do you move up to it to defend it?

RULING

You have to wheel forward, until your front rank is parallel aligned with the LLO. You do not count as defending the low linear obstacle if your front rank exceeds the LLO at any point or if your front rank is not entirely aligned to the LLO, be it due to other models or insuffcient movement .

Magic

#40 Comfaq

2 Movement Phase

QUESTION

Can a unit using the Fly(X) special rule pass freely without penalty above areas "treated as" or "counting as" difficult, dangerous or impassable terrain due to the effect of a spell (in particular Magical Vortex)?

RULING

No. Fly(X) allows the unit to move over physical terrain features without penalty, but Magical Vortexes and areas affected by a spell are not terrain features. "Magical Vortexes are considered tall enough to affect even models flying high above the battlefield", so units that Fly through them or their area of effect are affected as any other unit (e.g. -1 to movement, low dice if charging, dangerous terrain tests, blocked by impassable, damage from vortexes).

References: Magical Vortexes GW FAQ 1.5.1 8

#198 Comfaq

1-3 Strategy Phase Conjuration

QUESTION

If a spell or ability states “all units within y may” or “all units within y gain an effect”, what happens if a unit moves outside of Y or the caster moves?

RULING

All units that are within Y may benefit from that effect, given they are within Y at the time they want to use the effect (aka the effect moves with the caster for the whole duration of X).

#217 Comfaq

3 Shooting Phase

QUESTION

Are hits suffered by miscast magical attacks?

RULING

Yes, given the nature of spellcasting, they are magical attacks

#268 Comfaq

3-1 Shooting Phase Declare Target

QUESTION

Can characters shoot multiple magic missiles per turn into different targets? A lone character would still be treated as a unit and therefore has to target the same unit?

RULING

Yes he can, the exemption for magic missiles on 209 is to be applied - a character can divide his magic missiles into different targets, chosing targets when each spell is cast.

References: Characters and Shooting CRB 209

#271 Comfaq

2-4 Movement Phase Remaining Moves

QUESTION

How is a unit of skirmishers moved by the spell Travel Mystical Pathway?

RULING

Draw a 12" radius around the whole unit. Each model can be replaced anywhere within that radius in coherency, and at least 6" away from any enemy unit.

#272 Comfaq

0 General Rules

QUESTION

Can you cast a Remains in Play spell, that is already casted?

RULING

Yes. While the rulebook says no, GW FAQ clarifies that the spell can be attempted to cast, but the current active spell is ended on the attempt.

References: GW FAQ

#319 Comfaq

2 Movement Phase

QUESTION

Can conveyance spells be cast on units or targets who already moved during that Movement Phase, including charging, fleeing or moving during the compulsory moves?

RULING

Yes. Unless otherwise specified in the spell's description, such spells can be cast on any valid friendly unit, respecting the normal criteria for choosing a target (i.e. within the caster's vision arc and range, not engaged in combat). Specific constraints and/or allowances may be defined in the spell's description, e.g. regarding the target unit/ character's movement before and/or after the spell, or whether it is fleeing or engaged in combat.

Skirmishers

#9 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Can Skirmishers change their facing during a move? Can they change direction? How do they charge? And how does forming up work with Skirmishers?

RULING

Normal Movement and Marching Skirmishers may freely change direction and pivot during normal movement and marching.

Charging with Skirmishers During a Charge, they follow the charge criteria, therefore may change direction only once and must follow the shortest path to the closest visible model in the target unit.

The closest model in the charging unit moves first: • A single pivot must be made as early as possible in order to contact the nearest model in the charged unit via the shortest route. • Move straight, with your front facing directly forward, into base contact.

Charging Skirmishers with Skirmishers The first moving model forms the center of the fighting rank upon contact. Other charging models have to form up (see below) in even numbers to the left and the right of that model. Maximum one model may be added in excess to that unevenly to one side. Against skirmishers you maximize only against the first contacted model of the enemy unit; adjust the path of the first charging model if it brings more of your models into base contact with the first contacted model. You do not have to alter your charge path in order to maximize the number of models in the enemy unit's fighting rank. Skirmishers Charging formed units When charging formed units, each model charges individually to form up (see below) to the charge target and form the fighting rank, so they can actively maximize base contact. Therefore, you have to prioritize base contact over the shortest route.

Units in Formed Formations (Open Order, Close Order etc.) charging Skirmishers Any unit charging a unit of Skirmishers must take the shortest route to contact the closest visible model. The Skirmishers then form up (see below).

Forming Up (as charger against the enemy unit, building the fighting rank or if charged) During Forming up, Skirmish models move in an order of their controlling player's choosing. They may move through friendly models and may pivot (once if charging). They form up edge to edge, front corner to front corner against the enemy fighting rank or behind if they have not sufficient movement. No model may move further than their M value, or their M value + the charge roll when charging. All Models unable to fully reach their required position in the ranks are removed as casualties (if the first model contacted is removed, others can still try to form up).

#131 Comfaq

0 General Rules

QUESTION

How does a unit reform from a ranked formation into Skirmish formation? Do models spread out to do so?

RULING

No models are moved during the reform into skirmish formation - leave all models in the unit in their exact same position and simply inform your opponent that they have reformed into skirmish.

References: Skirmishers CRB 185 – 187 GW FAQ

#244 Comfaq

0 General Rules

QUESTION

How do Skirmishers conduct a flee move or Give Ground? What happens when they flee through units?

RULING

If in Skirmish Formation (not formed up), determine center-to-center, then flee with all models parallel in this direction without pivoting the unit. Give Ground the same way, stopping the whole unit if at least one model encounters an obstacle.

If any model in the skirmish unit moves through another unit, then all models continue moving in the same direction until they are no longer within 1" of an enemy or overlapping a friendly unit, taking peril tests as normal.

If models flee through units, move the whole unit the same distance. If the unit encounters an impassable terrain piece, each model moves as close as possible along that terrain piece and returns then to the original flee path

During Flee or Give Ground, if at least one model moves off the board, the whole unit is destroyed.

References: Skirmishers CRB 184f, GW FAQ

#338 Comfaq

4-4 Follow Up & Pursuit

QUESTION

A skirmisher unit that has formed up into Close Formation during combat must maintain this formation until it is no longer engaged at the end of the Combat phase. How does reform work while the unit is in this Close Formation (FBIGO, restrain & reform, Catching the Curs)? How does being formed up interact with Fleeing and Panic? Can you still use Chariot Runners when being Formed up?

RULING

Close Formation" is read as a distinct mode within Skirmish Formation: the unit is still a skirmisher, but currently "formed up" (edge-to-edge, ranked). While formed up, the unit behaves like a formed unit for movement purposes: pivoting and rearranging ranks/files are allowed, and it may adopt another keyword formation (e.g., Open Order) if permitted. The unit will also flee exactly like a formed unit. However, it must remain formed up until the end of the Combat phase, and does not re-form up again when pursuing into a new enemy (it keeps the ranks/files it already has).

For Panic, the rules for Skirmishers & Panic speak of being Skirmish Formation and not of Ranks, which the formed up skirmisher formation unit still fulfills. Therefore, it will only cause panic in Skirmisher units if fleeing through and if another skirmisher unit flees through them while being formed up, they will still suffer panic.

You cannot use Chariot Runners to move with a Chariot through formed up Skirmishers.

References: GW FAQ, Formed up Skirmishers, Skirmishers in Combat

#358 Comfaq

0 General Rules

QUESTION

If a unit of skirmishers takes casualties and has no other choice than to remove models in a way that two or more characters that have joined said unit lose coherency with the unit, what happens to the characters?

RULING

As stated on Core Rulebook at pag. 184 no models can be removed if their removal would cause a unit to lose coeherency. When it is not possible to remove a model without losing coherency simply exchange the model with the closest model. Remove the exchanged model instead.

2-1 Movement Phase Declare Charges and Charge Reaction

QUESTION

Does a frenzied unit need to declare a charge if there is a friendly unit in it's way, if the friendly unit could itself declare a charge and move out of the way?

RULING

No, the frenzied unit only has to declare a charge if the blocking unit is declaring a charge but the blocking unit is not obliged to do so

References: Frenzy, Impetuous GW FAQ 1.5.1 9

#57 Comfaq

3-1 Shooting Phase Declare Target

QUESTION

When using Evasive, how does it interact with Targeting, Magic Missiles, Bombardment, Cannon Fire and Line of Sight?

RULING

Evasive can be used after a unit has been targeted by shooting. If the unit evades out of LOS or out of range, the attacks are lost. The following exceptions and special cases apply:

- Bombardment: You Target the unit by placing the template over it. If the unit uses Evasive, the template will not move with the unit, but will be resolved at the initial positon.
- Cannon Fire: If you target the enemy model, and the model moves by using evasive, the model and the target point are still separate entities. As you determine the target point in step 1, choose target point, which is the same as targeting, the point is then fixed on the initial position of the models base edge, similar to Bombardment - "once you have chosen your target point" puts marking the target point and targeting on the exact same step. The shot will always be conducted from the target point.
- Magic Missiles: Use evasive before the casting roll is even made, after the target is announced. The wizard then may chose to not make the casting roll. ("unit may continue with its shooting as declared")

References: Evasive CRB 168

#115 Comfaq

2-1 Movement Phase Declare Charges and Charge Reaction

QUESTION

When a unit that causes Terror declares a charge, when is the Leadership test taken and how is a failed test resolved? How does this interact with multiple charges?

RULING

When a unit that causes Terror declares a charge, the target must immediately take a Leadership test, before any further charges are declared. If the test is failed, the unit must declare Flee as its charge reaction. The flee move is resolved as normal, together with the other charge reactions. In the case of multiple charges, as the unit has declared Flee, it flees from the charging unit with the highest Unit Strength, following the normal rules for multiple charges. Note that Terror tests are not limited to one, so if multiple units with Terror charge, you have to pass multiple tests.

#119 Comfaq

0 General Rules

QUESTION

Can Units adopt Special Rules or Formations that would prevent characters from joining them, while joined by such a character? (for example: grail pilgrims becoming unbreakable while joined by a non-unbreakable character or units in open order reforming to skirmishers while joined by a character of a different sub-type or troop type).

RULING

The character must first leave the unit, before the unit may adapt skirmish formation. If the character already joined the unit prior to the special rule coming into effect, the whole unit including the character gets to use the special rule.

References: Characters & Units CRB 207

#130 Comfaq

2 Movement Phase

QUESTION

How do you reform a unit from Skirmish Formation to Close or Open Order?

RULING

If you reform from skirmishing formation, maintain the centre of the unit as good as possible and rank all models up around that point. You may freely chose the facing of the unit. Place command group models accordingly. Every model may move up to twice its movement characteristic as stated under maneuvers. Remove any skirmishers as casualties that are not able to rank up.

References: Skirmishers CRB 185 – 187Maneuvers CRB 124Reform CRB 125GW FAQ

#204 Comfaq

2-3 Movement Phase Compulsory Moves

QUESTION

Can a unit with random movement move into contact with a unit that was not "at least partly in its front arc" as long as it fulfills all criteria for charging (single wheel etc.) stated on 126 (see GW FAQ)? For example, an enemy unit that is behind the unit with random movement but reachable with a single wheel?

RULING

Yes, you don't need LoS or the enemy unit to be in your front arc since you do not declare the charge. As long as you fulfill the charge criteria (shortest route, only one wheel etc.), that is a perfectly acceptable "move into contact".

References: Random Movement CRB 176

#218 Comfaq

3-2 Shooting Phase Roll to Hit

QUESTION

When calculating how many models can shoot using Volley Fire, when do you round?

RULING

You round after calculating the models in each rank. Example: For a unit that is 5 models wide and 5 ranks deep on level ground, 5 from the first rank, 3 each from the second (5/2=2.5, rounded to 3), third, fourth, and fifth ranks can shoot. In total, 17 models will shoot.

References: Volley Fire CRB 180

#242 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Do frenzied (or impetuous) units always have to use Swiftstride or Fly when charging

RULING

Yes, see GW FAQ they always will use special rules that benefit their charge.

References: GW FAQ

#254 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Can you drill a unit that is part of multiple units charging an unit if the unit with drilled is blocked on both sides by units that charge along of that unit?

RULING

No, Drilled takes place before the charge move and the units are considered to move simultaneously. Would the units charge different targets, the active player could first move the blocking units away and drill then. With multiple units charging the same target, this is not possible.

References: Drilled CRB 167, Multiple Charging Units CRB 130

#256 Comfaq

2-2 Movement Phase Charge Moves

QUESTION

Can a unit that is charging make use of the Drilled special rule in a way that causes accidental contact during a charge or that results in a charge against multiple targets?

RULING

No, unless the unit is in marching column and the minimum widt requested to leave the marching column already causes accidental / a multiple target charge. In that case the unit is allowed to Redress the ranks to be able to charge and conduct a multiple charge against other targets, but only against those needed to actually conduct the charge.

References: Multiple Charge Targets CRB 130, Accidental Contact During a Charge CRB 131

#269 Comfaq

2 Movement Phase

QUESTION

Do models with the fly (x) rule suffer a -1 movement penalty and have to use the lowest of 2d6 when charging while starting their movement in terrain.

RULING

Yes, models with fly (x) always begin their movement on the ground, and any unit that start their movement in terrain suffers its effects.

References: Fly (X) CRB 169

#275 Comfaq

2-1 Movement Phase Declare Charges and Charge Reaction

QUESTION

Should all effects that impact stand and shoot apply to all rules that utilize it as a function such as fire and flee?

RULING

Yes, errata all rules that impact stand and shoot to apply to any rule that uses it as part of its functions (Banner of Chalons, Quick Shot)

References: Stand & Shoot CRB 120, Fire & Flee CRB 169

#324 Comfaq

0 General Rules

QUESTION

How is Regeneration applied for a model that suffers an unsaved wound with the Multiple Wounds (X) special rule, if the model has less than X Wounds remaining?

RULING

An unsaved wound with the Multiple Wounds (X) special rule causes the target to lose X Wounds (instead of 1), lost simultaneously. If the model has fewer than X Wounds remaining, it loses all its remaining Wounds, and excess wounds have no further effect (no spillover), but will count for Overkill in a Challenge. The model then attempts to Regenerate the lost Wounds.

If a troll with 3W left suffers an unsaved wound with Multiple Wounds (5), it loses its 3 remaining Wounds, then attempts to regenerate the 3 lost Wounds. The 2 potential wounds in excess have no effect. If a skeleton suffers an unsaved wound from a cannonball with MW (D3+1), it loses it single Wound, then attempts to regenerate it. The other potential wounds in excess have no effect.

References: GW FAQ

#331 Comfaq

2-1 Movement Phase Declare Charges and Charge Reaction

QUESTION

When can you declare a counter charge? Can you use Counter Charge if you are not able to conduct the pivot or reach the opponent?

RULING

Counter Charge is a charge reaction which does not underly the requirements for declaring a charge. All limits of declaring Counter Charge are specificed in GW FAQ. You can declare a counter charge outside of line of sight and without having the ability to reach your opponent. If you hit an opponent unit with the counter charge move after the pivot, you count as doing accidental contact. If you cannot fully pivot, you will not move at all and if you cannot move after the pivot, you will also not move, but you still count as charging.

References: GW FAQ

#346 Comfaq

0 General Rules

QUESTION

A unit affected by certain spells (Earthen Ramparts, Miasmic Mirage), formation (marching column) or that has rallied cannot charge or make a charge moves. How does this interact with Random Movers contacting enemies, Counter Charge or Pursuit Into a Fresh Enemy?

RULING

Since all these count as charging, and therefore as charge moves for special rules like Frenzy or Furious Charge and Impact Hits, you cannot conduct these when under such effects.

References: GW FAQ

#398 Comfaq

3 Shooting Phase

QUESTION

Are baggage trains considered impassable terrain for the purposes of the crunch rule?

RULING

No. Baggage trains are not impassible terrain for shooting purposes, including the Crunch rule for cannon fire. They are treated as impassible only for the purpose of moving and positioning units.

References: GW FAQ, Cannon Fire Crunch CRB 227

#409 Comfaq

0 Faction Rules

QUESTION

Are Fanatics units?

RULING

Yes, a fanatic is a unit (except for all cases that are explained and listed under their unit entry) as it has a model profile, including characteristics, special rules, equipment etc. This means they work as any other unit, with the following exceptions:

- cannot be charged or have attacks directed against them (with the exception of enemy shooting attacks, against which they count as lone characters) and cannot be targeted by any spells (with the exception of enemy magic missiles), not even by their owner.
- does not engage with other units, but follows the rules for fanatic movement when hitting them.
- do not give away victory points when dying.
- their special rule which allows units to move through them forces units to charge through fanatics towards their charge target. Note that fanatics being units will force the following interactions:
- They count as unit for the 1" check of give ground, which is not being disabled by the Fanatic Movement rule.
- Fanatics can hit each other (see the COMFAQ entry for units destroyed while moving) and can never leave the board.
- They provide cover and will cause ambushers and units returning from offside the battlefield to keep distance to them.
- They will cause peril tests when units flee through them in addition to the Fanatic Ball & Chain rule.
- They will cause panic in units and will potentially cause units to flee from them if the fanatic is the closest enemy unit.
- Score domination.

References: Ravening Hordes Forces of Evil 26 Fanatics

#410 Comfaq

3-2 Shooting Phase Roll to Hit

QUESTION

How is cover determined?

RULING

Cover is a measure of how obscured LoS is. How much of the "other model or unit" is visible or obscured is determined considering the definition of LoS, including rules that define when models do or don't block Line of Sight (Large Target, Insignificant, Vantage Point). This means, among others, that non-Large models do not provide cover if the shooting or target unit is a Large Target, that models not on a Vantage Point (Hill) do not provide cover if the shooting or target unit is entirely on a Vantage Point (Hill), and that Insignificant models never provide cover. Remember that Large Targets never benefit from cover. Note that for terrain categories that do not have a specific rule for Line of Sight (e.g. buildings, linear obstacles, ruins, battlefield decoration…), Line of Sight has to be determined by checking the actual "true" Line of Sight from the model, if not stated otherwise by the tournament organizer.
